SERVICE IN FRESH

Working safely with the aerial work platform
(Veilig werken met de hoogwerker)

Code: I18.7ENG

Revisie: 1

Versiedatum: 12-02-2024

Start of work:

- Only use the aerial work platform after you have received the safety instruction for working safely with the aerial work platform.
- In case of malfunctions and defects: do not use the aerial work platform.
- Make sure the aerial work platform is positioned on a flat surface.
- Do not use the aerial work platform outdoors if the wind force is higher than 6.
- Do not work above product. Ensure that the food safety will not come in danger.
- Make sure other people are not at risk when you work with the aerial work platform. If necessary, mark your working area so other people cannot enter this area.

Operational:

- Pay attention to pipes and electricity lines when you work at height.
- Use of safety harness is man mandatory. The harness must be attached to the man basket.
- Use of safety harness is also required when the aerial work platform is being moved to an other working place.
- Do not exceed the maximum permissible load.
- Keep the aerial work platform clean and free of garbage.
- Make sure that no materials will stick out / hang out of the man basket.
- Prevent materials from falling out of the man basket.
- Make sure the control panel remains accessible.
- Close the fence.
- Use the control panel slowly and with regular movements to make sure that the aerial work platform will move/work smoothly and without any fast/shocking movements.

Defects:

- Report defects immediately to your manager.
- Do not use the aerial work platform.
